No need to plug in

## WITNESS THE TNGA DIFFERENCE

True to our commitment of making ever-better cars, the Toyota New Global Architecture or TNGA is one of our latest achievements. Experience its full power and benefits with the new Corolla Cross.

When starting the car, the electric motor takes over to save on fuel.

As you drive at a constant speed, the electric motor works with the gas engine.

The gas engine kicks in each time you speed up to provide more power for acceleration.

Stepping on the brake recharges the battery that powers the electric motor.

Regenerative Braking lets the car to self charge by turning the motor in a generator.

### EFFICIENT 1.8L ENGINE

A 1.8L inline-four engine with Atkinson cycle exclusively designed for the hybrid system which achieves excellent fuel efficiency with a lightweight and compact design.

### TRANSMISSION

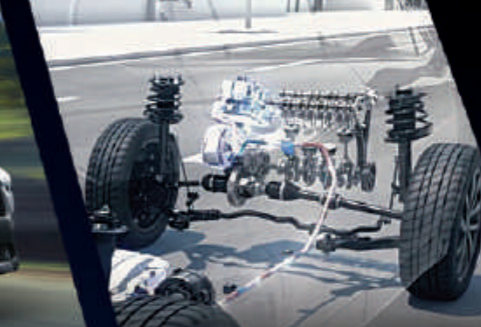

The Continuously Variable Transmission (CVT) complements the 1.8L engine providing better performance, drivability, and fuel efficiency.

### LESSER CARBON FOOTPRINT

Reduced fuel consumption means minimal CO2 emissions. Enjoy a drive that's better for the environment.

### QUIETER AND SMOOTHER RIDE

Electric motors make a very little noise while running, giving you a calmer and quieter ride.

### DEBUNKING THE MYTH

Aren't hybrid vehicles difficult to own and expensive to maintain?

No, because our hybrid batteries are designed to last the car's life span with proper maintenance.

Since it self-charges, it's like driving a conventional vehicle. No need to worry about plugging it in and charging it. Just gas it up like you normally would, but now less frequently.

It's no different from the periodic maintenance of a gas or conventional model; simply bring it to your local Toyota dealership when it's time for a regular check-up.
